The perfect Combination

MORPHEUS® 76°

www.baader-planetarium.de/morpheus

*All you need for
a perfect imaging train*

The Morpheus® 76° wide field eyepieces combine the popular Spacewalk-feeling with a sharp image all over the field – almost without distortion! They are slim-fit for binoviewing with ample eye relief for eyeglass wearers, and the Safety-Kerfs guard against slipping – there is no undercut and no tilt. All cameras can attach at the M43-thread.

The BBHS Star diagonal features a sputtered Broad-Band Hard-Silver coating with dielectric overcoat that is applied onto temperature inert Sital-glass-ceramics, this makes up for the brightest viewing sensation you've ever had. The 2"-ClickLock-clamp effortlessly clamps any load or eyepiece.

The Baader Diamond Steeltrack® (BDS) focuser features a unique, micro-g geared high precision drive system made of true diamonds never accomplished before. In comparison to conventional focusers, there is zero backlash, zero cogging, and zero flexure. The standard 2" eyepiece clamp ring may be replaced with optional T2, M48, M68 direct-thread adapters for the shortest backfocus ever possible – or even a 2" ClickLock clamp. BDS-focusers are available for Newtonians, Refractors and SC/HD-telescopes. An optional temperature compensated Diamond SteelDrive motor fits onto all BDS.
